The Self-Help Trap: What 20+ Years of “Optimizing” Has Taught Me

TIM FERRISS · 08 MAR 2026 · [SOURCE](#)

One danger of modern self-help.

“We cannot reason ourselves out of our basic irrationality. All we can do is to learn the art of being irrational in a reasonable way.”

— Aldous Huxley, *Island*

It was cold out, but none of us were cold.

I sat with five men in the mountains of Montana. As the sun set, the fire in the center cast dancing light on our faces. Reclined against fallen trees in a tight circle, we ate mushrooms and fish we’d found under trees and along streams. The whole crew burst into laughter yet again, and one of the guides passed around a fresh batch of pine needle tea.

Bathed in warmth, I took off a layer and glanced skyward through an opening in the trees. The stars shone like crystals on black velvet, and the show—the biggest meteor shower of the year—was starting.

In that moment, there was nothing to do. Nothing to improve. Nothing to fix.

It was perfect.

The older I get, the more I think that self-help can be a trap. Sometimes the cure is worse than the disease. I say this after ~20 years of writing self-help and a lifetime of consuming it.

Spend enough time in the world of “improvement,” and you’ll notice something strange: The people most obsessed with self-help are often the least helped by it. Behind the smiles and motivational quotes, behind closed doors and after a drink or two, the truth is that they’re not able to outsmart their worries.

On one hand, perhaps this unhappiness is precisely what lands one in self-development in the first place, right? I long assumed this about myself, and it’s partially true.

On the other hand, what if self-help *itself* is actually creating or amplifying unhappiness?

When AI people talk about LLMs having personalities, or wanting things, or even having souls⁴, these are technical terms, like the “memory” of a computer or the “transmission” of a car. You simply cannot build a capable AI system that “just acts like a tool”, because the model is trained on *humans* writing to and about other *humans*. You need to prime it with some kind of personality (ideally that of a useful, friendly assistant) so it can pull from the helpful parts of its training data instead of the horrible parts.

1. This is all pretty well understood in the AI space. Anthropic wrote a [recent paper](#) about it where they cite similar positions going all the way back to 2022. But for some reason it’s not yet penetrated into communities that are more skeptical of AI.

↵

2. You could explain this in terms of “the stories we tell ourselves”. Many people (though [not all](#)) think that human identities are narratively constructed.

↵

3. I wrote about this last year in [Mecha-Hitler, Grok, and why it’s so hard to give LLMs the right personality](#). A little nudge to change Grok’s views on South African internal politics can cause it to start calling itself “Mecha-Hitler”.

↵

4. I have long believed that Claude “feels better” to use than ChatGPT because it has a more coherent persona (due mainly to Amanda Askell’s work on its “soul”). My guess is that if you tried to make a “less human” version of Claude, it would become rapidly less capable.

↵

The Bag-of-Documents Model for Query Understanding and Retrieval

DANIEL TUNKELANG · 19 MAY 2026 · [SOURCE](#)

So why do Claude and ChatGPT act like people? According to Beacom, AI labs have built human-like systems because AI lab engineers are trying to hoodwink users into emotionally investing in the models, or because they're delusional true believers in AI personhood, or some other foolish reason. This is wrong. AI systems are human-like because **that is the best way to build a capable AI system**.

Modern AI models - whether designed for chat, like OpenAI's GPT-5.2, or designed for long-running agentic work, like Claude Opus 4.6 - do not naturally emerge from their oceans of training data. Instead, when you train a model on raw data, you get a "base model", which is not very useful by itself. You cannot get it to write an email for you, or proofread your essay, or review your code.

The base model is a kind of mysterious gestalt of its training data. If you feed it text, it will sometimes continue in that vein, or other times it will start outputting pure gibberish. It has no problem producing code with giant security flaws, or horribly-written English, or racist screeds - all of those things are represented in its training data, after all, and the base model does not judge. It simply outputs.

To build a *useful* AI model, you need to journey into the wild base model and stake out a region that is amenable to human interests: both ethically, in the sense that the model won't abuse its users, and practically, in the sense that it will produce correct outputs more often than incorrect ones. What this means in practice is that **you have to give the model a personality** during post-training¹.

Human beings are capable of almost any action at any time. But we only take a tiny subset of those actions, because that's the kind of people we are. I could throw my cup of coffee all over the wall right now, but I don't, because I'm not the kind of person who needlessly makes a mess². AI systems are the same. Claude could respond to my question with incoherent racist abuse - the base model is more than capable of those outputs - but it doesn't, because that's not the kind of "person" it is.

In other words, human-like personalities are not imposed on AI tools as some kind of marketing ploy or philosophical mistake. Those personalities are the medium via which the language model can become useful at all. This is why it's surprisingly tricky to "just" change a language model's personality or opinions: because you're navigating through the near-infinite manifold of the base model. You may be able to control which direction you go, but you can't control what you find there³.

Modern self-help contains an in-built flaw:

To continually improve yourself, you must continually locate the ways you are broken.

Fortunately, there are a few perspective shifts that make all the difference. It took me embarrassingly long to figure them out.

To get started, let's take a fresh look at an old concept.

MASLOW'S HIERARCHY OF NEEDS?

"I suppose it is tempting, if the only tool you have is a hammer, to treat everything as if it were a nail."

— Abraham Maslow

Maslow's Hierarchy of Needs has captured the minds of hundreds of millions. It offers simplicity in a terrifyingly complex world.

Abraham Maslow's "[A Theory of Human Motivation](#)" (1943) contains five levels, which are typically presented like the below pyramid. This one is pulled from [the Wikipedia entry](#) on the subject:

We've all seen it. Clear as day, you can see the goal post at the top: self-actualization.

LFG! It's time to journal and 80/20 myself! Pass me a shaman and some modafinil.

That's the mission. That's the point.

Right?

But hold on. A critical footnote got lost in the shuffle. In his later writings, especially notes compiled in *The Farther Reaches of Human Nature* (1971), Maslow added a *sixth* level above self-actualization:

Self-transcendence.

That update never quite made it out of the crib. The consultants are to blame, but that comes later.

Self-transcendence means going beyond the self — seeking connection with something greater, such as service to others, nature, art, or the divine. Why is it important? Well, for one thing, as [Tony Robbins](#) put it at an event long ago: “‘I, I, I, me, me, me’ gets to be a really fucking boring song.”

But it’s not just a boring song; it’s dangerous to your health.

DON’T BE A SOMO

“**The man who renounces himself, comes to himself.**”

— Ralph Waldo Emerson

Self-help is dangerous precisely because it easily becomes self-fixation.

A focus on improving the self usually first requires finding problems with the self. This is quite the pickle. In a society that rewards problem-solving, you can end up hallucinating or exaggerating unease in order to fix it. This leaves you always in the red, always one step behind. Imagine a dog chasing its tail that has committed to being unhappy until it catches the tail... but it’s always just a few inches short. Still, it whirls around and around, “doing the work.” Perfection always recedes by one more book, one more seminar, one more habit tracker.

Put in more colorful terms, misdirected self-help turns you into a self-obsessed masturbatory [ouroboros](#) (SOMO).

To remind me of the SOMO risk, I have this sticker on my laptop:

A picture is worth a thousand social media posts about yourself. Sticker from [Porous Walker](#).

Now, to be clear, I still love self-help. Ain’t no way Timmy can give up the sauce. There’s a place for it.

From The Bible to Seneca, and from Ben Franklin to Stephen Covey and far beyond, there’s a lot of valuable advice worth taking. I used to mainline it all – no time to waste! – and jump straight into action. This did some good, but there was a lot of collateral damage.

Why?

Because there are at least three “tectonic plates of self-help” that I couldn’t see for decades, and they dictate how much net-positive or net-negative comes from all the striving. Before you sprint, you want to calibrate your direction.

The world has always been run by rich men. The robber barons of the Gilded Age were known for their ruthlessness in the accumulation of wealth—hiring Pinkertons to shoot striking unionists. But they directly engaged with the world around them, using their wealth and power to muscle it into its most profitable form. And although today’s billionaires are clearly manipulating society to maximize their own profit, something else is also happening—a disassociation from the reality of cause and effect, from meaning and history. These men no longer feel the need to change the world in order to succeed, because their success is guaranteed, no matter what happens to the rest of us.

“I’m finished,” yells Daniel Plainview, perched happily on the polished floor of his own celestial kingdom. Though he has just committed a crime, he has never felt so free.

This article appears in the [May 2026](#) print edition with the headline “Everything Is Free and Nothing Matters.”

Giving LLMs a personality is just good engineering

SEANGOEDECKE.COM RSS FEED · 03 MAR 2026 · [SOURCE](#)

AI skeptics often argue that current AI systems shouldn’t be so human-like. The idea - most recently expressed in this [opinion piece](#) by Nathan Beacom - is that language models should explicitly be tools, like calculators or search engines. Although they *can* pretend to be people, they shouldn’t, because it encourages users to overestimate AI capabilities and (at worst) slip into [AI psychosis](#). Here’s a representative paragraph from the piece:

In sum, so much of the confusion around making AI moral comes from fuzzy thinking about the tools at hand. There is something that Anthropic could do to make its AI moral, something far more simple, elegant, and easy than what Askill is doing. Stop calling it by a human name, stop dressing it up like a person, and don’t give it the functionality to simulate personal relationships, choices, thoughts, beliefs, opinions, and feelings that only persons really possess. Present and use it only for what it is: an extremely impressive statistical tool, and an imperfect one. If we all used the tool accordingly, a great deal of this moral trouble would be resolved.

otherwise rational people into operating against their own interests. Empathy is something done to you by others—a vulnerability they exploit, a back door through which they gain access to your resources and will. This rejection of empathy as a human value gives cover to people who don't want to feel anything at all. If empathy is the problem, then lack of it isn't a deficiency—it's an advantage.

Elizabeth Bruenig: The conservative attack on empathy

I finally met Bezos on the last day of Campfire, at lunch, after my wife had broken her wrist. I went over to thank him for having us, and he asked how our Campfire experience had been. I told him that it was great, but that unfortunately my wife had broken her wrist that morning when she slipped on the wet grass while kicking a ball with our 6-year-old son.

The night before, we'd all stood by the pool at the beach club watching a cadre of synchronized swimmers execute a flawless water routine. I had spoken with a famous novelist, who said, "I just don't understand why I'm here." A famous rock star was about to start an acoustic set. The famous chef had made paella. Somewhere deep under my skin, a brutal pox was beginning to form.

The next morning, my wife fell, and I found myself in a black SUV with a team of private-security contractors, who whisked us to the back entrance of a Santa Barbara emergency room, where she was seen and treated right away. We made it back in time to watch the Supreme Court justice Zoom in from Washington, D.C.

How was your Campfire? Bezos asked me an hour later, and because I am an honest person, and because I have been a host myself, I decided he would want to know that there had been a problem, but that his team had reacted quickly and been extremely helpful. To be clear, I was in no way blaming him, nor was I shaking down the richest man on Earth. Instead, I was simply offering Bezos, also a husband and father, a brief human connection.

But when I told him what had happened, Bezos looked horrified. He did not say "I'm so sorry." He did not say "Do you need anything?" Instead, he made a face, and in an instant, an aide came and whisked him away. When presented with the opportunity for empathy, even performative empathy, he chose escape.

A few hours later, on the private plane home, a famous movie producer offered my wife a blanket. My children's faces were covered in spots. Under my fingernails, red welts were beginning to rise.

THE THREE TECTONIC PLATES OF SELF-HELP

"As to methods there may be a million and then some, but principles are few. The man who grasps principles can successfully select his own methods. The man who tries methods, ignoring principles, is sure to have trouble."

— Harrington Emerson

In the last few years, my life has become much more of a joy than a grind, and that's because I've focused on three tectonic plates.

Let's take a close look at each.

1. Intention

Individual or Social?

Americans, in particular, worship at the altar of the rugged individualist. There are clear upsides to this. But steeped in a culture – offline and especially online – that puts the self on a pedestal, we can take self-improvement to be an end unto itself: a better self.

But is it an end unto itself? Does it automatically produce good things? I now have my doubts.

Here's one analogy I've drawn for myself.

Let's pretend that life is the game of soccer. You can work on the mechanics of soccer by yourself. You can always get better at dribbling, shooting, and running drills as a solo practitioner. You can read dozens of books, study tape, and earn a PhD in the physics of ball flight. You can post videos of stunning shots on YouTube and get showered by emojis.

But none of this is actually playing the game of soccer.

You can spend your whole life preparing for, instead of playing, the game of life.

But why would anyone, including yours truly, succumb to this?

Subconsciously, it spares you from the messiest but most rewarding game of all: human interaction. Perhaps people hurt or traumatized you long ago. You might also justify the endless polishing, as I did, with some version of "Once I've perfected myself, then I'll be ready for relationships." But here's the rub: that practice is exactly endless. You can always get better at dribbling and penalty kicks.

Digging further, focusing on improving the self is often in service of trying to control the world, especially if things were unpredictable or unstable when growing up. Banish emotion, live by spreadsheets, and all can be well. All can be *controlled*, or so the illusion goes. But as soon as you're interacting with – let alone depending on – other people, control as a construct goes out the window. And so we consciously or subconsciously avoid the messiness. This is also one of the reasons why a lot of optimizing achiever folks have a hard time in intimate relationships.

So how do I think about “self-help” now, having realized all of the above?

It is refreshingly simple: the goal is to build and improve my relationships. The sooner you get on the real field with real players, the sooner you can get to playing soccer and engaging with life. No more auto-fellating, even with the best of intentions. We've evolved over millions of years to be deeply social creatures, and the more you dodge that IN REAL PHYSICAL LIFE, the more you will suffer. This is why solitary confinement in prisons is often considered cruel and unusual punishment... and yet we do it to ourselves all the time.

There are a few questions that help corral this tectonic plate of *intention*:

- How does any given “self-help” help me in my relationships, and how can I apply it with other people *today* or *this week*?
- How can I take the ship out of the harbor and test it where it counts?

2. Audience

Do you have an audience for your self-development? If so, be careful.

Nary a minute can be spent on social media without bumping into a CAPS-rich “HOW X CHANGED MY LIFE” or a photo carousel of an ayahuasca retreat. If only Costa Rica got a dime for every bikini-clad healer under a waterfall!

Welcome to the theater of performative self-help. I won't belabor this, as we've all seen it, but I suggest reading about the [insidious creep of audience capture here](#), and don't forge ahead in the fame game before reading [11 reasons not to become famous](#). It's hard to put the genie back in the bottle, so you should know what that genie will do to your life.

But the truth is that most of us aren't extreme examples of this. But even minor tendencies in this direction can do extreme damage over time.

The closer I've gotten to the world of wealth, the more I understand that being truly rich doesn't mean amassing enough money to afford superyachts, private jets, or a million acres of land. It means that everything becomes effectively free. Any asset can be acquired but nothing can ever be lost, because for soon-to-be trillionaires, no level of loss could significantly change their global standing or personal power. For them, the word *failure* has ceased to mean anything.

Adam Serwer: How America chose not to hold the powerful to account

This sense of invulnerability has deep psychological ramifications. If everything is free and nothing matters, then the world and other people exist only to be acted upon, if they are acknowledged at all. This is different from classic narcissism, in which a grandiose but fragile self-image can mask deep insecurity. What I'm talking about is a self-definition in which the individual grows to the size of the universe, and the universe vanishes. Asked recently if there is any check on his power, President Trump—himself a billionaire, and by far the richest president in American history—said, “Yeah, there is one thing. My own morality. My own mind. It's the only thing that can stop me.” Not domestic or international law, not the will of the voters, not God or the centuries-old morality of civic and religious life.

Decades of research in developmental psychology have shown that moral reasoning develops through consequences—not punishment, necessarily, but experiencing the effects of your actions on others, receiving honest feedback, [having to accommodate reality as it actually is](#) rather than as you wish it to be. It's not that the wealthy become evil; it's that their environment stops teaching them the things that nonwealthy people are forced to learn simply by living in a world that pushes back. When you can buy your way out of any mistake, when you can fire anyone who disagrees with you, when your social circle consists entirely of people who need something from you, the basic mechanism by which humans learn that other people are real goes dark.

Thomas Chatterton Williams: The very powerful men who think introspection is dumb

When Peter Thiel said, “I no longer believe that freedom and democracy are compatible,” he wasn't talking about your freedom. He was talking about his own. You don't exist. When Musk took a chainsaw to the federal government as part of [the inside joke he called DOGE](#), he did so with the air of a man who believed that nothing matters—poverty, chaos, [human suffering](#). He was having fun. It didn't even matter that the [entire destructive exercise](#) ultimately yielded no practical financial gains. For him, the outcome was a foregone conclusion: He could only win, because losing had lost its meaning.

Since the 2024 election, there has been a philosophical shift on the right, and especially among tech billionaires, to vilify the idea of empathy. Musk has called empathy “the fundamental weakness of Western civilization.” He sees it as a weapon wielded by liberal society to bludgeon

lead singer of an alt-country band didn't run the world, nor did a noted author who would later be accused of impropriety. But finding myself at that resort by exclusive invitation, I now knew exactly what people meant when they talked about the elite.

Sitting in the lecture hall, pencils out, listening to a famous chef explain his humanitarian work, it was easy to feel like the solution to the world's problems lay within our grasp. And yet, looking around at faces I had only ever seen in a magazine or on-screen, I had an unsettling revelation: This is the hubris of accomplishment. To be declared a genius at one thing is to begin to believe you are a genius at everything.

Here we were, 80 individuals with a combined net worth that was greater than a small city's yet infinitesimal compared with the wealth and dominion of our host. How did he view this exercise—as a first step toward changing the world, or as a performative display of his reach and influence?

Bezos was everywhere that weekend—in a tight T-shirt, laughing too loudly, arms thrown around his teenage sons. He had recently become the world's second centibillionaire, his net worth hovering somewhere around \$112 billion, about half of what it is today. That number, previously unimaginable, had made him unique on a planet of 8 billion people, and you could feel it in the room. Even the richest and most famous among us were drawn to the energy of this impossible wealth.

Martin Baron: Where Jeff Bezos went wrong with *The Washington Post*

Though we didn't know it at the time, Bezos's first marriage would be over a few weeks later. My defining impression of his wife that weekend was sadness, even though Bezos made a big show of performing the role of family man. In hindsight, it is that performance that sticks with me. The Jeff Bezos of 2018 acted as if he still believed that people's impression of him mattered, that his financial and social value could be affected by negative publicity. He still believed that his actions had consequences. He had not yet freed himself—the way Daniel Plainview freed himself—from the rules of men.

Eight years later, Bezos and two of the world's other richest men—Mark Zuckerberg and Elon Musk—have clearly left the world of consequences behind. They float in a sensory-deprivation tank the size of the planet, in which their actions are only ever judged by themselves.

Below are a few questions that I've found helpful for nudging this particular tectonic plate in the right direction:

- If you couldn't tell a soul about “the work” you're doing, would you still do it? If not, you're not developing yourself; you're curating yourself.
- How has sharing your personal development created tradeoffs?
- If you *had to* take down 20% of your most popular posts, which would you take down and why?
- Are you describing strong catalysts (psychedelics, The Hoffman Process, you name it) instead of doing the post-session integration that makes them truly valuable?
- Have you become more robust or more fragile by offering your inner workings up to public vote?
- Has your social presence made you more or less of the person you want to be? How would the you of three or five years ago feel about your last year of posts? What about the you of 10 years from now?

3. Assumption

What are the fundamental assumptions behind your doing “the work”?

Let's begin with [a Buddhist parable](#) that I first heard from the incredible [Jack Kornfield](#).

The old Master points to a big boulder and asks a disciple, “See that large rock over there?”

“Yes”, says the disciple.

“Do you think it's heavy?” continues the Master.

“Yes, it's very heavy!” replies the student.

“Only if you pick it up,” smiles the Master.

Once again, the fundamental assumption behind self-help is often this: Something is not OK. Something is wrong. Something is not enough. Something needs fixing. If I can't find it, I'll create it.

We've established this. But there is a follow-on assumption that matters a lot.

If I fix the things that aren't OK, all will be well. If I improve myself enough, if I only work hard enough, I can finally eliminate my suffering.

I hate to inform you, but this doesn't work. I'm also thrilled to inform you that this doesn't work. You can stop picking up a lot of boulders.

There is one book that most opened my eyes to this reframe – *Already Free: Buddhism Meets Psychotherapy on the Path of Liberation* by Bruce Tift. It offers a terrifying but ultimately liberating realization: there is no perfect escape from suffering. It doesn't exist. But there is a way to find your long-sought unclenching, and it lies in cultivating your skill of acceptance as much as that of improvement.

Now, I can hear the chorus: *Has Tim gone soft? Given up the good fight? Is he telling everyone to chill after he himself red-lined and got the spoils? How convenient! And...*

Hold on a second. I'm telling you – intelligent acceptance is high-leverage. It's probably one of the highest forms of leverage. This is an approach that helps preserve your energy for where it really matters. My early forays into Stoicism and Seneca The Younger helped set the conditions for my biggest wins from 2004-2010. Still, I only learned a small fraction of what I needed.

So how do you cultivate your skill of acceptance without becoming complacent?

This is a big question and what I love about Bruce's book. Compared to a strictly Western or purely Eastern book, he blends them and offers a surgical guide to using *both* action and acceptance. You don't have to be a bull in a china shop or a cow in the rain; there is a middle path. That middle path is where all the gold is buried.

If the only tool you have is "self-improvement," you'll become a hammer looking for nails in a world that is 50% screws. I tried it. It can create the veneer of success, but it will leave your inner world in turmoil.

Suffice to say, the dual dance is the most joyful. Upgrade your toolkit with that in mind. Read Bruce's book. If it doesn't click, try *Radical Acceptance: Embracing Your Life with the Heart of a Buddha* by Tara Brach, which had a large impact on my life a decade before I found Bruce's book. In a sense, the writing of Seneca prepared me for Tara, which then prepared me for Bruce. So grab them all and thank me later.

If you want serenity, you need to be able to put the Serenity Prayer into practice. Seriously, I read it all the time.

On a warm October Thursday, a fleet of private jets was dispatched to airports in Van Nuys and New York to shepherd guests to Santa Barbara in style. At that point I had only a vague sense of who else was coming—famous people, rich people, influential people, and me. A guest list, I was told, would be given to us once we arrived. Families were invited; an on-site nanny would be provided *for each child*.

So my wife and I got our two children from Austin to Los Angeles and took a 45-minute jet ride north, with a television mogul and a comedian on board. Bezos had bought out the entire Biltmore resort for the weekend, as well as the beach club across the street. He had brought in a security firm from Las Vegas to ensure our safety and privacy. Even the weather felt expensive, and when we were shown to our rooms, the designer gift bags we found were filled with luxury goods.

Alexandra Petri: The 10 things the Bezoses are almost certainly grateful for each morning

Each morning, we gathered in a lecture hall to hear presentations. If you've ever seen a TED Talk, you understand the format. The year I went, a sitting Supreme Court justice was interviewed, and a neurologist talked about technological advances in prosthetics. In the afternoons and evenings, we were encouraged to exchange ideas over drinks and four-course meals, with no set purpose—to network, in other words, with some of the most rarefied talent on Earth. The most common question I heard was "Why am I here?"

"Why am I here?" asked the 1980s hair-metal singer. "Why am I here?" asked the Pulitzer Prize-winning novelist, the famous anthropologist, the presidential historian. Only the movie stars and the billionaires didn't ask: They had done this kind of thing before. It turns out there is a circuit of idea festivals. Many tech billionaires host one, and if you find yourself on the right list, you can spend much of the year traveling the world, eating Wagyu, and discussing how to make the world a better place with the most famous talk-show host in history.

That's how the weekend started. Here's how it ended: My wife broke her wrist slipping on wet grass, and both children and I came down with hand, foot, and mouth disease. This is not a joke. One of us went home with her arm in a sling; the other three developed itchy, painful red blisters all over our faces and extremities. If you're looking for a sign from God as to whether hanging out with the richest man on Earth is right for you, pay attention when he sends you not one plague, but two. Suffice it to say we have never been back to Campfire, nor have we ever been invited.

At drinks on the second night, the head of a major talent agency asked me what I thought of the weekend. I said, "I've spent my whole career trying to figure out how the world works. I didn't realize I could just come here and ask the people who ran it." On some level I was kidding. The

(Illustration by Tim Enthoven)

At the end of Paul Thomas Anderson’s 2007 movie, *There Will Be Blood*, Daniel Day-Lewis’s oil-baron character, old now and richer than Croesus, beats Paul Dano’s preacher to death with a bowling pin. Dano’s Eli Sunday, a nemesis of Day-Lewis’s Daniel Plainview during his seminal, wealth-building years, has come to sell Plainview the oil-rich land that he once coveted. But Plainview doesn’t need the land anymore, because—as he explains in one of the most famous monologues in modern cinema—he has sucked out all the oil hidden beneath it from an adjoining property, like a milkshake.

Desperate for money, Eli begs for a loan. Instead, Plainview chases him around a bowling alley and murders him with great enthusiasm. Once it’s over, a butler comes to see what all the noise was about. “I’m finished,” Plainview yells.

No matter how many times I watch that movie, and I watch it a lot, I have never once taken those words to mean *I’m done for. There will now be consequences for my actions*. Quite the opposite: They mean that Plainview has completed his journey, through the acquisition of wealth and power, to a realm outside the moral universe. He’s finished, in other words, pretending that the rules of human society apply to him.

In 2018, I was a guest at Jeff Bezos’s Campfire retreat in Santa Barbara, California. It’s an annual event in which the Amazon founder invites 80-plus guests—celebrities, artists, intellectuals, and anyone else he thinks is interesting—to spend three nights at a private resort. I had recently been approached by Amazon about moving my film-and-television business over from Disney, and although I had declined (or maybe *because* I had declined), Bezos’s team invited me to Campfire, perhaps keen to impress me with the power of his reach.

From the March 2024 issue: The rise of techno-authoritarianism

MASLOW’S HAMBURGER OF NEEDS?

“The more one forgets himself—by giving himself to a cause to serve or another person to love—the more human he is and the more he actualizes himself. What is called ‘self-actualization’ is not an attainable aim at all, for the simple reason that the more one would strive for it, the more he would miss it. In other words, self-actualization is possible only as a side-effect of self-transcendence.”

— Viktor E. Frankl

How can we easily keep ourselves on the right track?

As I remind myself these days: **It’s the relationships, stupid.**

For a nice simple visual, let’s revise Maslow’s pyramid with all of this in mind. This is easy, as Maslow never drew his model as a rigid pyramid!

He described “classes” of needs that were unfixed, overlapping, and that could reverse in order. And believe it or not, self-actualization was only ever for the “self-actualizing minority.” In the 1960s, his work was co-opted by consultants and corporate trainers who needed a progression to sell. True story.

Given all this, and after decades of trial and error, here’s where I’ve landed:

Maslow’s Hamburger of Needs.

Ahhh... what? Not to worry. It’s the same good ol’ Maslow ingredients, but I think of it as a hamburger:

For our purposes, the meat, the whole point of the hamburger, is that middle layer: relationships. That is the center of life. The heartbeat.

As luck would have it, when you improve the heartbeat, it also feeds everything else.

You’ll notice that the meat contains Abe’s most-important addendum—the sixth level of self-transcendence. Focusing on things bigger than yourself is a critical piece of the ultimate puzzle. Faith, nature, family, meditation, causes that outlive you, etc. – take your pick. But be careful. If you do it to inflate the ego or impress others, it’s self-obsession again, not self-transcendence. If you need credit, it doesn’t count.

Of course, it should go without saying but the top and bottom layers matter a lot. A hamburger is a giant mess without the bun. Friends will get sick of you crashing on their couch and eating their food.

But the bread and dressing layers exist to serve the middle. That’s the payload. Everything is in service of the payload. And the payload circulates benefits back to the edges, and then the cycle repeats. Even if you think this is oversimplified claptrap, temporarily assuming it’s true will help you.

What if nearly everything you focused on — calendar, habits, goals — aimed to improve your relational life somehow? What if you took this as a challenge for even a week? Your lens on the world changes dramatically.

You say yes differently.

You say no more clearly.

Your to-do list for life slowly transforms.

What if all that you focused on, all that you do, had to improve that middle layer in some fashion?

It’s a damn hard question if you’ve been on the *self*-help train for a while. I get it.

So let’s try something easier: **What if it only changed how you approach your to-do list? Try hamburger-first each day for 1-2 weeks and tell me what happens. Add and do the things that improve your relational life FIRST. Nothing on the list? Create something. It could be as simple as cooking dinner for your spouse, complimenting at least three people a day for a week, or introducing yourself to the barista you see every morning. Getting started is how you get grooving.**

ARE YOU DOING SELF-HELP, OR IS SELF-HELP DOING YOU?

For friendship makes prosperity more shining and lessens adversity by dividing and sharing it.

— Marcus Tullius Cicero

In his *Moral Letters to Lucilius*, Seneca the Younger famously wrote that “These individuals [who put money at the center of life] have riches just as we say that we ‘have a fever,’ when really the fever has us.”

What if self-help is similar?

Obsessing over the self never provides peace. It cannot make you whole, as you aren’t the whole. Becoming whole starts by putting down the rock you didn’t even know you were carrying.

Because at the end of the day—and at the end of a Montana night—the point was never yourself.

It was never the pyramid.

It was never the optimization.

It was the people around the fire.
