- My next iteration was “**Stop writing model routers, use an LLM Gateway**”. Ok, prescriptive, evocative. But didn’t cover the other elements other than model routing. One could shorten to “Stop writing your own LLM Gateway” but that doesnt quite express what people do.

- My next one is “**It's not your job to DIY an LLM Gateway**”. No buzzword bc “your job” is implied (for a Latent Space audience), a little curiosity gap, LLM buzzword, strong opinion. But still not strong enough.

- Final one is “**LLM Gateway: The One Decision That Removes 100 AI Engineering Decisions**”. Leans on Tim Ferriss’ madlbs.

It’s very common for the “tail to wag the dog to wag the tail” - the title is so important to clickthrough and so impactful to the message, that you spend a bunch of time on just the title itself, because that determines the piece you will write, then write the piece, then you go back and tweak the title based on what happened.

Amateur writers think their content has 95% of the value and then spend 5% on the title. Pros will put the value of titles closer to 50% and then act like it.

You Should Break The Rules Once You Understand Human Behavior More Intuitively Than Rules Can Model

See title of this post. No better aura than intentional, conspicuous, successful rulebreaking.

The Self-Help Trap: What 20+ Years of “Optimizing” Has Taught Me

TIM FERRISS · 08 MAR 2026 · SOURCE

One danger of modern self-help.

> **“We cannot reason ourselves out of our basic irrationality. All we can do is to learn the art of being irrational in a reasonable way.”**
> — Aldous Huxley, *Island*

It was cold out, but none of us were cold.

I sat with five men in the mountains of Montana. As the sun set, the fire in the center cast dancing light on our faces. Reclined against fallen trees in a tight circle, we ate mushrooms and fish we’d found under trees and along streams. The whole crew burst into laughter yet again, and one of the guides passed around a fresh batch of pine needle tea.

Bathed in warmth, I took off a layer and glanced skyward through an opening in the trees. The stars shone like crystals on black velvet, and the show—the biggest meteor shower of the year—was starting.

In that moment, there was nothing to do. Nothing to improve. Nothing to fix.

It was perfect.

***

The older I get, the more I think that self-help can be a trap. Sometimes the cure is worse than the disease. I say this after ~20 years of writing self-help and a lifetime of consuming it.

- {CONVEY EXPERIENCE/SCALE} with {THING}
    - e.g. What We Learned from a Year of Building with LLMs, Insights from over ***10,000*** comments on "Ask HN: Who Is Hiring" using GPT-4o

There’s loads more templates that work, please suggest in comments and I can add/review.

You can also browse the masters of microcopy like Steph Smith and Shaan Puri, and if you are worried about clickbait, you can see Veritasium’s take or Simon Willison’s Highlights.

also Andrew Chen senpai:

Understand Buzzword Metagame

Buzzwords work. Because of a mix of human psychology and algorithmic recsys. Don’t avoid them, just use them judiciously. This involves the ability to read the room, which many smart people sadly cannot without significant involvement in the broader community you are trying to speak to. I don’t see any way around it other than trying to authentically immerse, or consult a friendly who does.

Not all buzzwords are created equal. Databricks/Berkeley tried to push Compound AI Systems, Gartner is pushing Composite AI and Composable business — this resonates with their audience, but not more broadly.

Pick the shibboleths that work for the community you want. AI Engineer worked for reasons that are well understood now. GraphRAG is working outside of the company that coined it. These buzzwords travel, go ahead and put them in there.

Buzzwords rise and fall. Try to catch them on the rise — go harder than everyone else on the rise up and regularly test their effectiveness, such that by the time your main buzzword has tapped out you’ve got 2-3 others cooking.

Workshopping your titles

I write this post out of frustration, but also to capture my own thought process. I’m currently procrastinating while writing a Latent Space post.

- The original title was Why every AI Engineer needs an AI Gateway. Good, genuine opinion, load bearing. But not super memorable.

Play Madlibs

You don't have to invent your title from scratch (nor should you always do what I'm about to suggest). Here's some templates that work well:

- {*BENEFIT EVERYONE WANTS*} **without** {*DOWNSIDE EVERYBODY EXPECTS*}
  - e.g. How to Get Rich (Without Getting Lucky), How to Market Yourself (Without Being A Celebrity). See also subtitle of this post.
- {*PRESCRIPTIVE OPINION*}, **don't** {*THING YOU DO*}
  - e.g. Parse, don't validate
  - alternative prescriptive opinion: **Never** {THING YOU DO}
  - see also title of this post
- {*POPULAR THING*} **IS DEAD**
  - unfortunately this is clickbait that works
  - e.g. Prompt Engineering is Dead, Big Data is Dead
  - when given at a conference for *POPULAR THING*, this is known as a Heresy Talk
  - opposite also works:
    - **The Rise of** {THING}
    - **The Unreasonable Effectiveness of** {THING}
- **Fundamentals of** {THING}
  - straightforward, people love fundamentals
  - also **How** {THING} **Really Works**
  - You can also flip it and go for the **Advanced** {THING} tier content

Spend enough time in the world of "improvement," and you'll notice something strange: The people most obsessed with self-help are often the least helped by it. Behind the smiles and motivational quotes, behind closed doors and after a drink or two, the truth is that they're not able to outsmart their worries.

On one hand, perhaps this unhappiness is precisely what lands one in self-development in the first place, right? I long assumed this about myself, and it's partially true.

On the other hand, what if self-help *itself* is actually creating or amplifying unhappiness?

Modern self-help contains an in-built flaw:

To continually improve yourself, you must continually locate the ways you are broken.

Fortunately, there are a few perspective shifts that make all the difference. It took me embarrassingly long to figure them out.

To get started, let's take a fresh look at an old concept.

MASLOW'S HIERARCHY OF NEEDS?

> **"I suppose it is tempting, if the only tool you have is a hammer, to treat everything as if it were a nail."**
> — Abraham Maslow

Maslow's Hierarchy of Needs has captured the minds of hundreds of millions. It offers simplicity in a terrifyingly complex world.

Abraham Maslow's "A Theory of Human Motivation" (1943) contains five levels, which are typically presented like the below pyramid. This one is pulled from the Wikipedia entry on the subject:

We've all seen it. Clear as day, you can see the goal post at the top: self-actualization.

LFG! It’s time to journal and 80/20 myself! Pass me a shaman and some modafinil.

That’s the mission. That’s the point.

Right?

But hold on. A critical footnote got lost in the shuffle. In his later writings, especially notes compiled in *The Farther Reaches of Human Nature* (1971), Maslow added a *sixth* level above self-actualization:

Self-transcendence.

That update never quite made it out of the crib. The consultants are to blame, but that comes later.

Self-transcendence means going beyond the self — seeking connection with something greater, such as service to others, nature, art, or the divine. Why is it important? Well, for one thing, as Tony Robbins put it at an event long ago: “‘I, I, I, me, me, me’ gets to be a really fucking boring song.”

But it’s not just a boring song; it’s dangerous to your health.

DON’T BE A SOMO

> **“The man who renounces himself, comes to himself.”**
> — Ralph Waldo Emerson

Self-help is dangerous precisely because it easily becomes self-fixation.

A focus on improving the self usually first requires finding problems with the self. This is quite the pickle. In a society that rewards problem-solving, you can end up hallucinating or exaggerating unease in order to fix it. This leaves you always in the red, always one step behind. Imagine a dog chasing its tail that has committed to being unhappy until it catches the tail… but it’s always just a few inches short. Still, it whirls around and around, “doing the work.” Perfection always recedes by one more book, one more seminar, one more habit tracker.

Put in more colorful terms, misdirected self-help turns you into a self-obsessed masturbatory ouroboros (SOMO).

To remind me of the SOMO risk, I have this sticker on my laptop:

Prescribe A Strong Opinion

Opinions are one of the most quotable things.

But more importantly, a good Opinion Piece is load bearing because it is eminently forwardable, and therefore viral and impactful. Your Job To Be Done is to be the definitive, conclusive, piece on that Opinion. Stake out territory in Opinion Space, list out all the arguments for, counter all the arguments against, provide datapoints, and watch that go further than anything you’ve ever done.

How to know what’s a good opinion? **Three Strikes rule**: If you repeat yourself three times, ship it. Even if you’re just quoting others, its fine, credit them and make it your own.

Mental Models and Frameworks are more complex opinions that allow others to scaffold their thought around you. My Radiating Circles and Measuring Developer Relations and Third Age of JavaScript did this.

Opinions contrary to an established opinion are the hardest to do well and the best when correct. What Clayton Christensen Got Wrong made Ben Thompson’s career. Rise of AI Engineer countered the prevailing Prompt Engineer -and- GPU Rich Startup/ML Engineer narrative at the time, with room to grow.

Curiosity Gap Dynamics

Marketers know the power of the Curiosity Gap. Here is where we toy closest with clickbait. I’ll be honest that I wasn’t even sure if I wanted to give it its own subheading, but its a very important concept that you should at least be aware exists, even if you’re going to ignore it.

Strong enough opinions create their own curiosity gaps; you won’t have to try very hard to make it interesting if you got my attention in 4 words anyway.

Curiosity gaps done poorly can lead to “burying the lede”, which make your talk less Quotable and you also don’t want to do that.

Simplest way to put it is; if the most interesting thing about your content is your title, and what people take away after having read your post matches what they would have predicted after reading your title, then you’ve probably said too much and could cut.

My hope in writing this piece is to **put an end to bad titles**.

If I sent you this guide, it is not an insult. You just don't have good title game. That's ok. You're great at what you do, title game isn't your job. I'm the guy that wrote How To Name Things and Two Words. I sent you this guide ***because*** your shitty title is the main thing stopping your readers from getting to the good part. If you didn't have anything good, I wouldn't bother with a lost cause.

First…

Towards Leveraging Corporate Speak For Maximum Enterprise Synergy

DO NOT:

- Start with "Leveraging" or "Towards" or "Navigating" or "Empowering"

Yeah just stop. There's no rescuing this when you start there. Just delete meaningless corporate weasel words. Anything >3 syllables is a red flag.

Make It Quotable

If you do not try to make your title roll off the tongue, it probably won't.

Literally imagine telling your friend about your talk. Telling a new acquaintance to google your blogpost. Having a fan of yours cite it back to you. How much do they stumble? Yeah. This has all happened to me.

There's an extremely high correlation between what are considered the best talks and the quotability of titles. Simple Made Easy. Inventing on Principle. Our list of best demos/pitches of all time.

Resist colons. It lacks confidence. Why Use Lot Word: ~~When Few Word Do Trick~~? You're not High School Musical: The Musical: The Series.

Put the SEO keyword vomit in the description.

Titles are for humans.

A picture is worth a thousand social media posts about yourself. Sticker from Porous Walker.

Now, to be clear, I still love self-help. Ain't no way Timmy can give up the sauce. There's a place for it.

From The Bible to Seneca, and from Ben Franklin to Stephen Covey and far beyond, there's a lot of valuable advice worth taking. I used to mainline it all – no time to waste! – and jump straight into action. This did some good, but there was a lot of collateral damage.

Why?

Because there are at least three "tectonic plates of self-help" that I couldn't see for decades, and they dictate how much net-positive or net-negative comes from all the striving. Before you sprint, you want to calibrate your direction.

THE THREE TECTONIC PLATES OF SELF-HELP

> **"As to methods there may be a million and then some, but principles are few. The man who grasps principles can successfully select his own methods. The man who tries methods, ignoring principles, is sure to have trouble."**
> — Harrington Emerson

In the last few years, my life has become much more of a joy than a grind, and that's because I've focused on three tectonic plates.

Let's take a close look at each.

1. Intention

Individual or Social?

Americans, in particular, worship at the altar of the rugged individualist. There are clear upsides to this. But steeped in a culture – offline and especially online – that puts the self on a pedestal, we can take self-improvement to be an end unto itself: a better self.

But is it an end unto itself? Does it automatically produce good things? I now have my doubts.

Here's one analogy I've drawn for myself.

Let's pretend that life is the game of soccer. You can work on the mechanics of soccer by yourself. You can always get better at dribbling, shooting, and running drills as a solo practitioner. You can read dozens of books, study tape, and earn a PhD in the physics of ball flight. You can post videos of stunning shots on YouTube and get showered by emojis.

But none of this is actually playing the game of soccer.

You can spend your whole life preparing for, instead of playing, the game of life.

But why would anyone, including yours truly, succumb to this?

Subconsciously, it spares you from the messiest but most rewarding game of all: human interaction. Perhaps people hurt or traumatized you long ago. You might also justify the endless polishing, as I did, with some version of "Once I've perfected myself, then I'll be ready for relationships." But here's the rub: that practice is exactly endless. You can always get better at dribbling and penalty kicks.

Digging further, focusing on improving the self is often in service of trying to control the world, especially if things were unpredictable or unstable when growing up. Banish emotion, live by spreadsheets, and all can be well. All can be *controlled*, or so the illusion goes. But as soon as you're interacting with – let alone depending on – other people, control as a construct goes out the window. And so we consciously or subconsciously avoid the messiness. This is also one of the reasons why a lot of optimizing achiever folks have a hard time in intimate relationships.

So how do I think about "self-help" now, having realized all of the above?

It is refreshingly simple: the goal is to build and improve my relationships. The sooner you get on the real field with real players, the sooner you can get to playing soccer and engaging with life. No more auto-fellating, even with the best of intentions. We've evolved over millions of

I do *not* expect juniors to *do* all of these things right away. But I would expect them to read through the list and *aspire* to one day be able to do all of these things. Until then, they can and should ask for help.

In fact, I don't expect *anybody* to *always* do *all of these things* for *everything*. It's a mental checklist of things to consider — problem, edge cases, tradeoffs, deployment, customers, messaging, … — but for quite a few things there aren't edge cases to consider. Or big tradeoffs to weigh. Or deployment is a solved problem. And maybe someone else does the messaging for you.

And I imagine that most of these things you shouldn't even consider when you work in a company with, say, 5000 employees. I've never worked in a company that large, only startups, so I can't speak to how to successfully ship a software feature at Apple, end to end.

But when you work in a small company in which there's only a single department, when you want to build things you're proud of, when you work with me and you say own something, I expect you to keep these things in mind and run through them before you declare something as done.

You know what *you* should own? A subscription to this newsletter:

Please for the love of all that is holy: Stop writing long boring Titles

SWYX · 30 MAR 2026 · SOURCE

People code switch. Every ethnic minority has lived experience of this. When you talk to me in Singapore, I sound very different than when I'm in San Francisco. And the way you talk at work is probably very different from how you talk to your kids and how you talk to your lover.

I've been dealing with a particularly virulent form of code switching in the simple form of titling blogposts and talks. When you ask the writer face to face what their thing is about, they can give you a perfectly human explanation. And then when they send you their piece, it's all "***Leveraging GenAI with Robust Data Foundations to Transform Businesses***". I've left my body by the time I read the first word.

- Do the work, with precision, with care, with a sense of urgency, with calmness. Do not half-ass things. Before you merge, ask yourself: am I proud of this? would I show this to John Carmack and say “here’s what I built, under these constraints, with these tradeoffs?”

- Test it manually. Yes, there’s automated tests. But in 99% of cases you can manually test or confirm that what you built works: you can run it yourself, you can ask an agent to run through test scenarios, you can poke at the data before and after, you can take screenshots, you can make a demo. Are you sure that what you did actually solves the problem?

- Make sure it lands in production and *works in production*. Is it deployed? Did the deploy fail? Do you need to activate a feature flag? Does the feature flag work? Can you use it in production? Can you confirm it’s actually deployed?

- If you think your colleagues needs to know about this change, because it’s new feature they should all test, or it’s a new convention in codebase, or maybe it’s a tricky thing everybody needs to be aware of, or something else: let them know! Do not underestimate peripheral vision: knowing that person X yesterday changed the behavior of how Z works might save person Y three hours of debugging today when a bug report related to Z comes in.

- Do customers need to know? Who reported the bug? Who’s blocked? Let them know.

- Does the world need to know? Announce that it’s out.

- Are there follow-ups? Do you need to check on what you shipped in the logs? A week later maybe?

Yes, that’s a lot. And there’s actually more, because I’m sure I forgot some stuff.

But that’s how you build a product in a small team. We don’t have PMs, we don’t have a Q&A department. We’re small, but we’re *great*, we can do all of that.

And it’s always okay to ask for help, it’s okay to ask questions, it’s okay to redo things and triple-check. What’s not okay is to implicitly assume that someone else will do the things here that you haven’t thought about.

“How does this apply juniors? You can’t expect them to really do all of that?”

I’ve been asked these questions, or variations of them, after I shared the thoughts above and here’s my answer.

years to be deeply social creatures, and the more you dodge that IN REAL PHYSICAL LIFE, the more you will suffer. This is why solitary confinement in prisons is often considered cruel and unusual punishment… and yet we do it to ourselves all the time.

There are a few questions that help corral this tectonic plate of *intention*:

- How does any given “self-help” help me in my relationships, and how can I apply it with other people *today* or *this week*?

- How can I take the ship out of the harbor and test it where it counts?

2. Audience

Do you have an audience for your self-development? If so, be careful.

Nary a minute can be spent on social media without bumping into a CAPS-rich “HOW X CHANGED MY LIFE” or a photo carousel of an ayahuasca retreat. If only Costa Rica got a dime for every bikini-clad healer under a waterfall!

Welcome to the theater of performative self-help. I won’t belabor this, as we’ve all seen it, but I suggest reading about the insidious creep of audience capture here, and don’t forge ahead in the fame game before reading 11 reasons not to become famous. It’s hard to put the genie back in the bottle, so you should know what that genie will do to your life.

But the truth is that most of us aren’t extreme examples of this. But even minor tendencies in this direction can do extreme damage over time.

Below are a few questions that I’ve found helpful for nudging this particular tectonic plate in the right direction:

- If you couldn’t tell a soul about “the work” you’re doing, would you still do it? If not, you’re not developing yourself; you’re curating yourself.

- How has sharing your personal development created tradeoffs?

- If you *had to* take down 20% of your most popular posts, which would you take down and why?

- Are you describing strong catalysts (psychedelics, The Hoffman Process, you name it) instead of doing the post-session integration that makes them truly valuable?

- Have you become more robust or more fragile by offering your inner workings up to public vote?

- Has your social presence made you more or less of the person you want to be? How would the you of three or five years ago feel about your last year of posts? What about the you of 10 years from now?

3. Assumption

What are the fundamental assumptions behind your doing "the work"?

Let's begin with a Buddhist parable that I first heard from the incredible Jack Kornfield.

> *The old Master points to a big boulder and asks a disciple, "See that large rock over there?"*
>
> *"Yes", says the disciple.*
>
> *"Do you think it's heavy?" continues the Master.*
>
> *"Yes, it's very heavy!" replies the student.*
>
> *"Only if you pick it up," smiles the Master.*

Once again, the fundamental assumption behind self-help is often this: Something is not OK. Something is wrong. Something is not enough. Something needs fixing. If I can't find it, I'll create it.

We've established this. But there is a follow-on assumption that matters a lot.

If I fix the things that aren't OK, all will be well. If I improve myself enough, if I only work hard enough, I can finally eliminate my suffering.

I hate to inform you, but this doesn't work. I'm also thrilled to inform you that this doesn't work. You can stop picking up a lot of boulders.

There is one book that most opened my eyes to this reframe – *Already Free: Buddhism Meets Psychotherapy on the Path of Liberation* by Bruce Tift. It offers a terrifying but ultimately liberating realization: there is no perfect escape from suffering. It doesn't exist. But there is a way to find your long-sought unclenching, and it lies in cultivating your skill of acceptance as much as that of improvement.

Below, after the Slack post, I added some thoughts on juniors on how I see this advice applying to them.

Just had a (great) conversation about ownership and engineering here and I realized that I often use the phrase "ownership" or allude to it, but haven't explained what "ownership" means to me in a while.

So, ownership.

If I ask you "can you own this?" or "can you take care of this?" or "are you on it?" — what I'm doing is I'm asking you to *own* it, to own the solution of a problem from end to end. From "we have a problem" to "we don't have to think about it again."

That means, when you say that you're owning something, the expectation is that you…

- Think about what the problem actually is. Maybe you already have a solution in mind, without having thought about what we're actually trying to solve here. Maybe you think "the problem is that we need to migrate from using X to using Y", but that's not a problem, that's a solution. The problem is likely something like "performance is bad", "it's not stable", "it fails for customer x". Maybe there's other possible solutions to that? Think about those. What are the tradeoffs? What's the best solution to go with considering these tradeoffs?

- Think about edge cases. What are they? Which ones are important? Which ones can we ignore?

- Think about failures. Network failures are a given, for example. How do we handle them? Retry? Well, how often? How long?

- Think about data flow. How much data is involved here? Does data need to be migrated? Cleaned up? How can I get my hands on data to properly test this? What invariants are in the data? What assumptions do I have about the shape of the data that I haven't confirmed yet?

- Think about how you'd test this. How can I know that what I built is correct or not? Are tests enough? Do I need to manually poke at things? Is the difference visible on a screenshot or in a video?

- How would we announce this? How do we communicate it? Can you picture it? How does it fit into the larger picture of our roadmap? Questions or concerns in that area — push back! ask!

Obsessing over the self never provides peace. It cannot make you whole, as you aren't the whole. Becoming whole starts by putting down the rock you didn't even know you were carrying.

Because at the end of the day—and at the end of a Montana night—the point was never yourself.

It was never the pyramid.

It was never the optimization.

It was the people around the fire.

Ownership

THORSTEN BALL · 08 JUL 2026 · SOURCE

Thoughts on ownership I sent to the Amp team in internal note

The following is an internal Slack message I sent to my Amp teammates after I had a conversation with one of them about ownership. It's only lightly edited.

I shared it before, but not here, because I didn't think too much of it. Then today, someone said their CTO shared my post with them and I thought: well, now I have to put it in the newsletter, don't I? So here we are.

Now, I can hear the chorus: *Has Tim gone soft? Given up the good fight? Is he telling everyone to chill after he himself red-lined and got the spoils? How convenient! And…*

Hold on a second. I'm telling you – intelligent acceptance is high-leverage. It's probably one of the highest forms of leverage. This is an approach that helps preserve your energy for where it really matters. My early forays into Stoicism and Seneca The Younger helped set the conditions for my biggest wins from 2004-2010. Still, I only learned a small fraction of what I needed.

So how do you cultivate your skill of acceptance without becoming complacent?

This is a big question and what I love about Bruce's book. Compared to a strictly Western or purely Eastern book, he blends them and offers a surgical guide to using *both* action and acceptance. You don't have to be a bull in a china shop or a cow in the rain; there is a middle path. That middle path is where all the gold is buried.

If the only tool you have is "self-improvement," you'll become a hammer looking for nails in a world that is 50% screws. I tried it. It can create the veneer of success, but it will leave your inner world in turmoil.

Suffice to say, the dual dance is the most joyful. Upgrade your toolkit with that in mind. Read Bruce's book. If it doesn't click, try *Radical Acceptance: Embracing Your Life with the Heart of a Buddha* by Tara Brach, which had a large impact on my life a decade before I found Bruce's book. In a sense, the writing of Seneca prepared me for Tara, which then prepared me for Bruce. So grab them all and thank me later.

If you want serenity, you need to be able to put the Serenity Prayer into practice. Seriously, I read it all the time.

MASLOW'S HAMBURGER OF NEEDS?

> **"The more one forgets himself—by giving himself to a cause to serve or another person to love—the more human he is and the more he actualizes himself. What is called 'self-actualization' is not an attainable aim at all, for the simple reason that the more one would strive for it, the more he would miss it. In other words, self-actualization is possible only as a side-effect of self-transcendence."**
> — Viktor E. Frankl

How can we easily keep ourselves on the right track?

As I remind myself these days: **It's the relationships, stupid.**

For a nice simple visual, let's revise Maslow's pyramid with all of this in mind. This is easy, as Maslow never drew his model as a rigid pyramid!

He described "classes" of needs that were unfixed, overlapping, and that could reverse in order. And believe it or not, self-actualization was only ever for the "self-actualizing minority." In the 1960s, his work was co-opted by consultants and corporate trainers who needed a progression to sell. True story.

Given all this, and after decades of trial and error, here's where I've landed:

Maslow's Hamburger of Needs.

Ahhh… what? Not to worry. It's the same good ol' Maslow ingredients, but I think of it as a hamburger:

For our purposes, the meat, the whole point of the hamburger, is that middle layer: relationships. That is the center of life. The heartbeat.

As luck would have it, when you improve the heartbeat, it also feeds everything else.

You'll notice that the meat contains Abe's most-important addendum—the sixth level of self-transcendence. Focusing on things bigger than yourself is a critical piece of the ultimate puzzle. Faith, nature, family, meditation, causes that outlive you, etc. – take your pick. But be careful. If you do it to inflate the ego or impress others, it's self-obsession again, not self-transcendence. If you need credit, it doesn't count.

Of course, it should go without saying but the top and bottom layers matter a lot. A hamburger is a giant mess without the bun. Friends will get sick of you crashing on their couch and eating their food.

But the bread and dressing layers exist to serve the middle. That's the payload. Everything is in service of the payload. And the payload circulates benefits back to the edges, and then the cycle repeats. Even if you think this is oversimplified claptrap, temporarily assuming it's true will help you.

What if nearly everything you focused on — calendar, habits, goals — aimed to improve your relational life somehow? What if you took this as a challenge for even a week? Your lens on the world changes dramatically.

You say yes differently.
You say no more clearly.
Your to-do list for life slowly transforms.

What if all that you focused on, all that you do, had to improve that middle layer in some fashion?

It's a damn hard question if you've been on the *self*-help train for a while. I get it.

So let's try something easier: **What if it only changed how you approach your to-do list? Try hamburger-first each day for 1-2 weeks and tell me what happens. Add and do the things that improve your relational life FIRST. Nothing on the list? Create something. It could be as simple as cooking dinner for your spouse, complimenting at least three people a day for a week, or introducing yourself to the barista you see every morning. Getting started is how you get grooving.**

ARE YOU DOING SELF-HELP, OR IS SELF-HELP DOING YOU?

> **For friendship makes prosperity more shining and lessens adversity by dividing and sharing it.**
> — Marcus Tullius Cicero

In his *Moral Letters to Lucilius*, Seneca the Younger famously wrote that "These individuals [who put money at the center of life] have riches just as we say that we 'have a fever,' when really the fever has us."

What if self-help is similar?
